Important Note

therascreen® EGFR RGQ PCR Kit (24), REF 870121

Dear, valued *therascreen* EGFR RGQ PCR Kit customer.

You have been informed previously that QIAGEN has revised the Instructions for Use for *therascreen* EGFR PCR Kits to reduce any risk resulting from fluorescence artefacts leading to invalid runs or false mutation positive results, and to emphasize the importance of thorough mixing of reagents. A lower cut-off for the delta C_T (ΔC_T) and an additional manual check for the delta CT values (ΔCT) was introduced to avoid any false positive results due to such fluorescence artefacts.

In this Important Note, we would like to inform you that the automatic calling of results in the Rotor-Gene Software has been updated and new revision of the corresponding kit handbook has been released:

- Revision 10 for REF 870121 *therascreen*® EGFR RGQ PCR Kit (24)

These new handbook revisions include all corresponding Instructions for Use changes. Please refer to the Document Revision History of the applicable *therascreen* EGFR RGQ PCR Kit Handbook for more details.

The Assay Package for automatic result calling is available for download in the *therascreen* EGFR RGQ PCR Kit product webpage at www.qiagen.com. Go to **Product Resources** > **Supplementary Protocols** to download the assay package.

Translations of this Important Note

QIAGEN provides the printed Important Note in the English language. Translations of the Important Note are electronically available in a portable document format (PDF). You may access the translated documents in the Product Resources tab of the corresponding product page in **www.qiagen.com**.
