EpiTect® Control DNA (human), methylated and bisulfite converted (100)

For 100 control reactions for methylation analysis

Control reactions should be performed when undertaking methylation analysis (e.g., methylation-specific PCR [MSP]) to ensure that the PCR primers are specific for the detection of methylated bisulfite converted or unmethylated bisulfite converted DNA.

The control DNA is shipped at room temperature and should be stored at –20°C immediately upon receipt. When stored under these conditions and handled correctly, this product can be kept for at least 6 months without showing any reduction in performance.

The methylated and bisulfite converted DNA is stored in EB Buffer (10 mM Tris·Cl) in a ready-to-use 10 ng/µl solution.

Complete in vitro methylation of the control DNA was achieved using *SssI methylase*. Bisulfite conversion of control DNA was achieved using the EpiTect Bisulfite Kit.

Important handling notes

- Set up all reaction mixtures in an area separate from those used for DNA preparation or PCR product analysis.
- Use disposable tips containing hydrophobic filters to minimize cross-contamination.
- We recommend use of 10 ng template DNA in each PCR.
- Control DNA can be diluted in an appropriate buffer (e.g., TE or water). **Note**: This may affect the stability of the DNA during storage.
- We strongly recommend EpiTect Bisulfite Kits for bisulfite conversion reactions.

Procedure

Use 1 µl (10 ng) of each control DNA for every PCR reaction.

We recommend using the EpiTect MSP Kit or EpiTect MethyLight PCR Kit for highly specific and reliable methylation-specific PCR results (see Table 1 and 2 for reaction setup).

Table 1. Reaction Setup Using EpiTect MSP Kit

Component	Volume/reaction	Final concentration
EpiTect Master Mix, 2x	25 µl	1x
Diluted primer mix		
Primer A*	variable	0.3–0.4 µM
Primer B*	variable	0.3–0.4 µM
RNase-free water	variable	–
Template DNA	1 µl	10 ng
Total volume	**50 µl**	

* A final primer concentration of 0.3 – 0.4 µM is optimal for most applications. However, for individual determination of best concentration, a primer titration from 0.2 µM to 0.5 µM can be performed.

Note: If smaller or larger reaction volumes are used, adjust the amount of each component accordingly.

Table 2. Reaction Setup Using EpiTect MethyLight PCR Kit

Component	Volume/50 µl reaction	Final concentration
Reaction mix		
EpiTect MethyLight Master Mix, 2x	25 µl	1x
10x primer–probe mix	5 µl	0.4 µM forward primer* 0.4 µM reverse primer* 0.2 µM probe (0.2 µM of each when using quantitative MethyLight Assays)
RNase-free water	variable	–
Template DNA (added at step 4)	1 µl	≤100 ng/reaction
Total volume	**50 µl**	

* A final primer concentration of 0.4 µM is optimal for most applications. However, for individual determination of best concentration, a primer titration from 0.4 µM to 0.6 µM can be performed.

Note: If smaller or larger reaction volumes are used, adjust the amount of each component accordingly.

Table 3. Cycling conditions for methylation PCR analysis using TaqMan probes

Step	Time	Temperature	Additional comments
Initial PCR activation step	**5 min**	**95°C**	HotStarTaq *Plus* DNA Polymerase is activated by this heating step
2-step cycling:			**Important: Optimal performance is only assured using these cycling conditions**
Denaturation	**15 s**	**95°C**	
Annealing/Extension	**60 s**	**60°C**	Combined annealing/extension step with fluorescence data collection
Number of cycles	40–45		The number of cycles depends on the amount of template DNA

Ordering Information

Product	Contents	Cat. no.
EpiTect Control DNA — for evaluation of PCR primers used for methylation analysis		
EpiTect Control DNA, unmethylated (100)	Unmethylated and bisulfite converted human control DNA for 100 control PCRs	59665
EpiTect Control DNA (1000)	Unmethylated human control DNA for1000 control PCRs	59568
EpiTect PCR Control DNA Set (100)	Human control DNA set (containing both bisulfite converted methylated and unmethylated DNA and unconverted unmethylated DNA) for 100 control PCRs	59695
Related products		
EpiTect Bisulfite Kit — for complete bisulfite conversion and cleanup of DNA for methylation analysis		
EpiTect Bisulfite Kit (48)	48 EpiTect Bisulfite Spin Columns, Reaction Mix, DNA Protect Buffer, Carrier RNA, Buffers	59104
EpiTect 96 Bisulfite Kit (2)	2 x EpiTect Bisulfite 96-well Plates, Reaction Mix, DNA Protect Buffer, Carrier RNA, Buffers	59110
